Example Would you rather have 100 today or 100 in a year Most would choose today because you could invest that 100 and earn interest making it worth more than 100 in a year Many online calculators can help calculate the future value or present value of money given an interest rate and time period

2 Risk and Return Higher potential returns often come with higher risk This is a fundamental tradeoff in investing Example Investing in a highgrowth tech startup carries significantly higher risk than investing in government bonds However the potential return on the startup could be substantially larger but theres a greater chance of losing your investment

3 Diversification Spreading investments across different asset classes to reduce risk Example Instead of putting all your money into one stock you diversify by investing in stocks bonds real estate and other asset classes This reduces the impact of a downturn in any single asset Visual A pie chart showing a diversified portfolio with percentages allocated to stocks bonds real estate etc
